Five axis machining is defined by five axes of motion enabling five degrees of freedom. Most five axes applications are configured with 3 linear axes which are

Acces PDF 5 Axis Machining Fanuc

situated in orthogonal,
Cartesian coordinate system
and two rotary axes. The
configuration of the two
rotary axes can be
classified into three basic
types: 1.

By optimizing FANUC CNCs with Mastercam's new post processor, machine tools will be able to produce parts, modeled in the CAD system, more precisely. "For 5-axis simultaneous

contouring, a quality
CAD/CAM system is critical,"
says Rick Schultz, Aerospace
Program Manager for FANUC
America.
