Red Tape tells the sometimes astonishing story of the making of laws, both good and bad, the recent explosion in rule making, and the failure of repeated attempts to rationalise the statute books - even governments themselves are concerned about the increasing number and complexity of our laws. Society requires the rule of law, but the rule of too much law means that the general public faces frustrating excesses created by overzealous regulators and lawmakers. Robin Ellison reveals the failure of repeated attempts to limit the number and complexity of new laws, and the expansion of regulators. He challenges the legislature to introduce fewer yet better laws and regulators by encouraging lawmakers to adopt practices which improve the efficiency of the law and the lives of everyone. Too much law leads to frustration for all - Red Tape is a long overdue expos of our legal system for practitioners and consumers alike.

This report provides an overview of the work of the European Union Committee in session 2012-13. It highlights some of the key policies examined through scrutiny work and inquiries, reflects on the Committee's work with this EU institutinos and other national parliaments, and gives a forward look at the work being undertaken in session 2013-14.

CEPOL aims is to bring together senior police officers from across Europe to share research and best practice, to encourage cross-border cooperation in the fight against crime and to help facilitate training and exchange programmes between European police forces. However, in March 2013, the Commission presented a proposal for a new Europol Regulation, one effect of which would have been to merge CEPOL with Europol. The Committee, the Government, the Directors of Europol and CEPOL, the European Parliament and the Council all opposed the proposed merger. A separate Regulation on CEPOL was therefore proposed. The new draft Regulation would allow CEPOL "broader objectives" and "modernised governance". The Government supports the work of CEPOL but is unhappy with a number of proposals in the Regulation, including the removal of the requirement that all attendees on CEPOL courses should be senior police officers, and the suggestion that Member States should designate a national unit to contribute to CEPOL's work programmes. The Committee points out that there are legal reasons why the UK must, at some stage, opt-in to the Regulation. It recommends that the Government to do so now, to give the UK a place at the negotiating table when the draft Regulation is discussed.

Bringing together scholars from Europe and North America, this book examines the engagement of legislatures across the world in foreign and security policy. The articles are specifically chosen to cover the whole range of foreign affairs questions from crisis management and military missions, arms trade, the Common Foreign and Security Policy (CFSP) of the European Union (EU), international energy agreements, to international trade negotiations. Drawing on a principal-agent framework, the book challenges the conventional wisdom of "executive autonomy" in foreign affairs, with parliaments using multiple ex ante and ex post instruments to monitor, oversee and control governments in external relations. Moving beyond the "politics stops at the water's edge" image, the articles highlight the role of party-political contestation instead of consensus in the name of national interest structuring parliamentary debates and decision-making in this increasingly politicised issue area. Considering the lack of research on parliamentary participation in foreign affairs beyond the specific case of the U.S. Congress, the book will also contribute to theory building and will deepen our understanding of legislative-executive relations. The chapters originally published as a special issue in West European Politics.

If you are one of the many people today looking for explanations and possible solutions to the ongoing Global Financial Crisis and Global Ecological Crisis, then this book should be on your reading list. Michael Tubbs spent eighteen years as a barrister representing smaller corporations against some of the giant corporations of capital which now dominate the "world global economy". Tubbs was in practice during the collapse of the 'top down' Soviet system, and its replacement by the equally 'top down' corporatist system. Tubbs' experience forced him to draw the unavoidable conclusion that: "EVERY CORPORATION OF CAPITAL IS POTENTIALLY, IN THEORY AND FACT, A CONSPIRACY AGAINST EVERYTHING ELSE IN SOCIETY EXCEPT ITSELF". He believes it is time that people understood the role that corporatism has played in bringing the world to its economic and environmental knees. He shows how the corporations of capital have gained so much power in society, to the detriment of democracy throughout the world. While private corporations have exploited our labour and our natural resources for their own greed, our governments have failed in their duty of care. Corporations continue to hide away their profits in tax havens, while ordinary citizens bear the brunt of the GFC and GEC, and no one accepts or apportionns blame. Tubbs argues it is time to take action - to lift the corporate veil of secrecy and privilege that protects corporations of capital, and to democratise them for the benefit of all.

This legislative scrutiny report on the Children and Families Bill deals with issues to do with adoption and looked after children (Part 1 of the Bill), family justice (Part 2), Special Educational Needs (Part 3), the Children's Commissioner (Part 5) and statutory rights to shared parental leave and pay (Part 6). The Report also includes an analysis of two issues connected with the Energy Bill.

Handbook on the Toxicology of Metals, Fourth Edition bridges the gap between established knowledgebase and new advances in metal toxicology to provide one essential reference for all those involved in the field. This book provides comprehensive coverage of basic toxicological data, emphasizing toxic effects primarily in humans, but also those of animals and biological systems in vitro. The fourth edition also contains several new chapters on important topics such as nanotoxicology, metals in prosthetics and dental implants, gene-environment interaction, neurotoxicology, metals in food, renal, cardiovascular, and diabetes effects of metal exposures and more. Volume I covers "General Considerations and Volume II is devoted to "Specific Metals. A multidisciplinary resource with contributions from internationally-recognized experts, the fourth edition of the Handbook on the Toxicology of Metals is a prominent and indispensable reference for toxicologists, physicians, pharmacologists, engineers, and all those involved in the toxicity of metals. Contains 61 peer reviewed chapters dealing with the effects of metallic elements and their compounds on biological systems Includes information on sources, transport and transformation of metals in the environment and on certain aspects of the ecological effects of metals to provide a basis for better understanding of the potential for adverse effects on human health Covers the toxicology of metallic nanomaterials in a new comprehensive chapter Metal toxicology in developing countries is dealt with in another new chapter emphasizing the adverse effects on human health by the inadequate handling of "ewaste Other new chapters in the 4th edition include: Toxic metals in food; Toxicity of metals released from medical devices; Gene-environment interactions; Neurotoxicology of metals; Cardiovascular disease; Renal effects of exposure to metals; Gold and gold mining; Iridium; Lanthanum; Lithium and Rhodium

What are the impacts of population growth? Can our planet support the demands of the ten billion people anticipated to be the world's population by the middle of this century? While it is common to hear about the problems of overpopulation, might there be unexplored benefits of increasing numbers of people in the world? How can we both consider and harness the potential benefits brought by a healthier, wealthier and larger population? May more people mean more scientists to discover how our world works, more inventors and thinkers to help solve the world's problems, more skilled people to put these ideas into practice? In this book, leading academics with a wide range of expertise in demography, philosophy, biology, climate science, economics and environmental sustainability explore the contexts, costs and benefits of a burgeoning population on our economic, social and environmental systems.

Highly Commended in Health and social care in the 2017 BMA Medical Book Awards The Mental Capacity Act (2005) regulates decision making processes on behalf of adults who are unable to give informed consent, due to a loss in mental capacity (be that from birth, or due to an illness or injury at some point in their lives). Since the Act's original conception the new Court of Protection is now firmly established, and there have been significant Supreme Court cases, as well as further guidance on the 2005 Act and major developments in the use and assessment for Deprivation of Liberty Safeguards. Thoroughly updated to take account of the many updates, developments and changes in legislation and guidance, the new edition of Dimond's authoritative guide will be warmly welcome by practitioners and students who need to understand and work within the Mental Capacity Act, and how it applies to their professional responsibilities. A highly practical guide to the Mental Capacity Act and its provisions since its conception in 2005 Relevant for a wide range of practitioners and students within health and social care Highly readable and easily accessible, even for those with no legal background Includes a range of learning features, including scenarios, questions and answers, key summary points, and applications for practice. Legal Aspects of Mental Capacity is an essential resource for all healthcare and social services professionals, students patient services managers and carers working with those who lack the capacity to make their own decisions.

In recent years, the internet has developed very quickly and became a major source of information all over the planet. Many scientists have used search engine query data to forecast econometric time series like consumer confidence indicators, unemployment rates, retail sales, house price indices, stock prices, volatility of stocks and even commodity prices. Following the prior research this study analyzes the impact of internet search engine data on capital markets. Many authors already have contributed to index level data and most of them on the US market. This study adds to the existing literature on the German stock market. Two research questions are answered: First, whether an increase in search queries drives individual stock returns and second, whether queries affect the implied volatility of stock options. After controlling for seasonality, autocorrelation and general market risk, in the further analysis also the Price-to-Book valuation, one year performance and historical volatility are examined in interaction with internet search queries.
