Using social cognitive theory of gender development, scripting theory, and heterosexual script theory as a framework, *Scripting Adolescent Romance* presents methods and analyses of data from in-depth interviews with 16 high school and young college students, and focus groups with over 100 individuals in this age group.

The study of gender differences began in earnest in the 1970s and has since increased dramatically to infiltrate virtually all fields of study in the social and behavioral sciences. Along the way, it was discovered that while women very often think and behave differently than do men, industrialized societies cater to masculine perspectives. The "Psychology of Women" emerged as a field of study focusing on just those areas in which women most often butted against assumed roles. And similarly, in the 1990s, the "Psychology of Men" emerged to focus on the same issues for men. The *Encyclopedia of Gender* covers all three areas under one cover, discussing psychological differences in personality, cognition, and behavior, as well as biologically based differences and how those differences impact behavior. Coverage includes studies of these differences in applied settings such as education, business, the home, in politics, sports competition, etc. Key Features * Over 100 In-depth chapters by leading scholars in the psychology of women and gender * Addresses critical questions of similarities and differences in gendering across diverse groups, challenging myths about gender polarization and the "Venus/Mars" distinction * Broad coverage of topics from theory and method to development, personality, violence, sexuality, close relationships, work, health, and social policy * Sensitive attention to multicultural and cross-cultural research * Clearly written, readable, comprehensive, with helpful guides (outline, glossary, reference list) * Raises difficult questions related to power, inequality, ethics, and social justice * Challenges the reader to revise established "truths" and to seek further information * Maintains a feminist and woman-centered focus

This collection explores the sexual content of U.S. mass media and its influence in the lives of adolescents. Contributors address the topic of sexuality broadly, including evidence not only about physical sex acts, but also about the role the media play in the development of gender roles, standards of beauty, courtship, and relationship norms. Chapters included here present new perspectives on what teens are paying attention to in the media, and offer insight into how teens are understanding and applying what the media present about sex and sexuality. Employing various methodological approaches, the studies also represent a diversity of adolescent audiences and deal with a wide variety of media content, ranging from teens' favorite TV programs to magazines, movies, music, and teen girls' Web pages. Taken as a whole, this volume highlights the significant roles the media play in adolescents' sexual lives. *Sexual Teens, Sexual Media* contributes important evidence to the ongoing debate over media effects, making it essential reading for scholars and students in media studies, as well as social and developmental psychology.

John Santrock's *Child Development* is widely considered the most accurate and up-to-date, topically-organized text in the field. Used by hundreds of thousands of students over ten editions, its learning-goals-driven learning system provides a clearer understanding of the content. The fully revised eleventh edition reinforces the highly contemporary tone and focus by featuring hundreds of new citations, including material from chapters from the sixth edition of the *Handbook of Child Psychology*.

The *Oxford Handbook of Media Psychology* explores facets of human behaviour, thoughts, and feelings experienced in the context of media use and creation.

Originally published in 2000, this was the first volume to examine adolescent romantic relationships.

The majority of scientific research on teen magazines has been conducted from a single-country perspective, even though the experience of sex and sexuality is known to vary by country. Moreover, no research to date has analyzed the sexual content of teen magazines and directly linked it to how young people think or feel about sex. In response to these shortcomings, this book analyzes the topics of sexual desire, sexual danger, virginity loss, pregnancy, and the hook-up culture in the most popular teen magazines of the United States and the Netherlands. Results are then linked to US and Dutch young people's magazine reading and fear of sex, and further investigated by religiosity. While this book primarily addresses researchers of adolescent sexual socialization, it also offers practical insights to parents, health educators, government officials, and magazine editors - ultimately revealing that adolescent sex as a 'forbidden fruit' is a relative term, contingent upon culture.

The volume is divided into four parts. Part One provides up-to-date trends on children and adolescents' access to media in the home, as well as the time they spend with television, computers, and the Internet. Part Two presents research that highlights the potentially negative impact of age-inappropriate or excess media use on children's physical, cognitive, social, and emotional well-being. Part Three offers examples of how media enhance children's education, health, and social connections. Part Four explores implications for the creation of high-quality, enriching content that speaks to the needs and interests of young people today.

This volume explores existing and emerging sexual cultures of contemporary India and the predicaments faced by abjected and sexual marginalities. It traces the sexual politics within popular culture, literary genres, advertisement, consumerism, globalizing cities, social movements, law, scientific research, the Hijra community life, (alternative) families and kinship and sites that define the cultural other whose sexual practices or identities fall beyond normative moral conventions. The chapters examine a range of connected sociological and political issues including questions of agency, judgments around intimate sexual relationships, the role of the state, popular understandings of adolescent romance, notion of legitimacy and stigma, moral policing and resistance, body politics and marginality, representations in popular and folk culture, sexual violence and freedom, problems with historiography, structural inequalities, queer erotica, gay consumerism, Hijra suicides and marriage and divorce. The volume also proposes certain transformative possibilities towards envisioning and (re)scripting sexual equalities. This interdisciplinary book will be important for those interested in sexuality studies, queer studies, gender studies, cultural studies, sociology, law, history, literature and Global South studies as well as policymakers, civil society activists and nongovernmental organizations working in the area.
