Gets them engaged. Keeps them engaged. Bob Blitzer's use of realistic applications instantly piques students' curiosity about the presence of mathematical concepts in the world around them. These applications are apparent throughout the entire program—from his relatable examples, friendly writing style, and thought-provoking features in the textbook, to the enhanced digital resources in the MyMathLab course. Blitzer pulls from topics that are relevant to college students, often from pop culture and everyday life, to ensure that students will actually use their learning resources to achieve success. With an expansion of the series to now include a Developmental Math "all-in-one" text (with content spanning prealgebra through intermediate algebra), and with an enhanced media program accompanying this revision, developmental students at all levels will see how math applies to their daily lives and culture. Also available with MyMathLab MyMathLab® is an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. Within its structured environment, students practice what they learn, test their understanding, and pursue a personalized study plan that helps them absorb course material and understand difficult concepts. **Note:** You are purchasing a standalone product; MyMathLab does not come packaged with this content. We live in a data-driven world, and the goal of this Canadian text is to teach students how to access and analyze these data critically. Canadian authors Jim Stallard and Michelle Boué emphasize that learning statistics extends beyond the classroom to an essential life skill, and want Canadian students to develop a "data habit of mind." Regardless of their math backgrounds, students will learn how to think about data and how to reason using data. With a clear, unimposing writing style and carefully chosen pedagogy, this text makes data analysis accessible to all students. **KEY TOPICS:** Introduction to Data; Picturing Variation with Graphs; Numerical Summaries of Centre and Variation; Regression Analysis: Exploring Associations between Variables; Modelling Variation with Probability; Modeling Random Events: The Normal and Binomial Models; Survey Sampling and Inference; Hypothesis Testing for Population Proportions; Inferring Population Means; Associations between Categorical Variables; Multiple Comparisons and Analysis of Variance; Experimental Design: Controlling Variation; Inference without Normality; Inference for Regression MARKET: A textbook suitable for all introductory statistics courses

Homework help! This manual contains detailed solutions for the even-numbered end-of-chapter problems and cumulative review exercises.

This manual contains completely worked-out solutions for all the odd-numbered exercises in the text.

In this revised text, master expositor Sheldon Ross has produced a unique work in introductory statistics. The text's main merits are the clarity of presentation, contemporary examples and applications from diverse areas, and an explanation of intuition and ideas behind the statistical methods. To quote from the preface, "It is only when a student develops a feel or intuition for statistics that she or he is really on the path toward making sense of data." Ross achieves this goal through a coherent mix of mathematical analysis, intuitive discussions and examples. \* Ross's clear writing style leads students easily through descriptive and inferential statistics \* Hundreds of exercises assess students' conceptual and computational understanding \* Real data sets from current issues draw from a variety of disciplines \* Statistics in Perspective highlights demonstrate real-world application of techniques and concepts \* Historical Perspectives sections profile prominent statisticians and events \* Chapter Introductions pose realistic statistical situations \* Chapter Summaries and Key Terms reinforce learning \* A detachable Formula Card includes frequently used tables and formulas to facilitate studying \* Enclosed CD-ROM contains programs that can be used to solve basic computation problems New in this Edition: \* Dozens of new and updated examples and exercises \* New sections on: assessing the linear regression model by analyzing residuals; quality control; counting principles; Poisson random variables \* Detailed edits and enhancements based on users' feedback \* A computerized test bank, plus updates to other ancillaries Ancillaries: \* Instructor's Manual \* Student Solutions Manual (ISBN: 0120885514) \* Printed Test Bank \* Computerized Test Bank \* Instructor's web site with additional online materials
